

HOME SERVICE PROFESSIONAL FOOTWEAR

Protection, Mobility & Comfort From Job to Job

Professional footwear fitting for electricians, plumbers, HVAC professionals, maintenance workers, home inspectors, contractors and other skilled trades.

YOUR WORKDAY DEMANDS MORE THAN A WORK BOOT

Home-service professionals rarely work in one environment. Your day may take you from the truck to a driveway, up stairs, through a garage or unfinished space, onto finished flooring, and back again.

You may kneel, crawl, climb, carry tools, and spend hours on your feet before doing it all over again.

That combination of movement, surfaces and job hazards means the right footwear has to do more than look like a work boot. It needs to support the way **you actually work**.

THE JOB DETERMINES THE PROTECTION

RESIDENTIAL SERVICE

Slip-resistant traction, lightweight comfort, stability, cushioning and support for repeated walking, stairs and indoor/outdoor transitions.

PLUMBING & WATER-RELATED WORK

Slip resistance, water protection, dependable traction and a safety toe when the job requires it.

ELECTRICAL & HVAC SERVICE

Safety toe when required, slip resistance, stability and appropriate electrical-hazard protection, along with all-day comfort.

CONSTRUCTION & NEW-BUILD SERVICE

Safety toe, puncture protection, slip resistance, water protection and rugged traction for demanding work environments.

AND THEN THERE'S YOUR FOOT

Workplace protection is only half of the fitting process.

Your footwear also has to accommodate your individual foot shape, support needs and daily demands.

- Wide or extra-wide feet
- Bunions or hammertoes
- Swelling or changing foot volume
- Diabetes or the need for protective footwear
- Custom orthotics or other foot supports
- AFO or other brace accommodation
- Previous foot or ankle problems
- Toe-box or pressure-point concerns
- Long shifts and end-of-day fatigue
- Frequent walking, stairs, kneeling or crawling

I DON'T JUST FIT YOU FOR A WORK SHOE

Occupation → Workplace hazards → Protection required → Your foot shape & needs → Orthotic/support needs → Footwear

That is the difference between simply buying a work shoe and receiving a **professional footwear fitting**.

I look at the demands of the job and the demands of the individual foot together.

YOUR WORK TAKES YOU EVERYWHERE. YOUR FEET HAVE TO GO WITH YOU.
